

# Top 5 Most Common Water Issues in Mixed-Use Buildings

Knowing there's a problem is just the start, Symmons Evolution provides the solution

## SOLUTIONS FOR TOP WATER ISSUES

### 1. Incorrect Temperature Settings

See real-time temperatures throughout your water system to reduce the risk of Legionella, scalding, ensure maximum energy efficiency, and troubleshoot potential occupant experience issues.

### 2. Unbalanced Risers

With a couple clicks, quickly identify which risers need balancing based on the charting data. Use the app as you walk around the property, adjusting as you go to monitor changes and corrections.

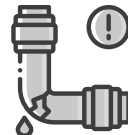

### 4. Recirculation Flow Rates

Poor recirculation flow rates creates havoc in the domestic hot water system. Chasing hot and cold water complaints sporadically is a nuisance. The Symmons Evolution system can quickly pinpoint both the problem, and the solution..

### 3. Key System Failures

Your team will immediately be notified in real-time of any significant fluctuations in temperature as a result of equipment failure in the Mechanical Room. Protect the property's bottom line from unnecessary reimbursements, and negative reviews.

### 5. Leak Related Issues

Properties with leak detectors installed in critical areas within the Mechanical Room, Kitchen, Laundry, etc are more likely to avoid significant water damage with the use of Symmons Evolution. Receive real-time notifications anytime water is present for ultimate peace of mind.
