

IceMate™

Cool Out, Big Style!

The biggest ice maker box with the coolest installation around

In the construction field, a professional installation means paying attention to the smallest details. The new IceMate™ ice maker supply box from Symmons is the best way to go pro when roughing or remodeling a kitchen. It's the largest, most durable box available, and it's a breeze to install.

IceMate has integrated tabs for mounting directly to a stud or use the sturdy metal straps to span a 16" stud bay. The recessed box design can be mounted in any orientation and provides easy access to the valve, all while still allowing full counter depth for the fridge.

IceMate feeds the fridge through a solid brass quarter-turn ball valve with a standard 1/4" compression connection. Piping connects via 1/2" sweat, PEX, or PEX Cold Expansion fittings. The valve is available with or without ASSE 1010-approved water hammer arrestors to meet code requirements, and IceMate is fully compliant with ASME A112.18.1, NSF 61, and NFS 372.

When it comes time to finish it off, IceMate's trim plate accommodates up to two sheets of 5/8" sheetrock, and the trim readily accepts interior paints for that truly professional install.

DISCREETLY DURABLE!

Heavy-duty PVC box recesses in the wall and lets you push the fridge all the way back without damaging the water line.

CODE COMPLIANT!

Quarter-turn ball valve is available with an integrated water hammer arrestor to satisfy code in many municipalities.

BEST WARRANTY!

Backed by an industry-best residential lifetime warranty and a commercial 10-year warranty!
